

Ideation Phase

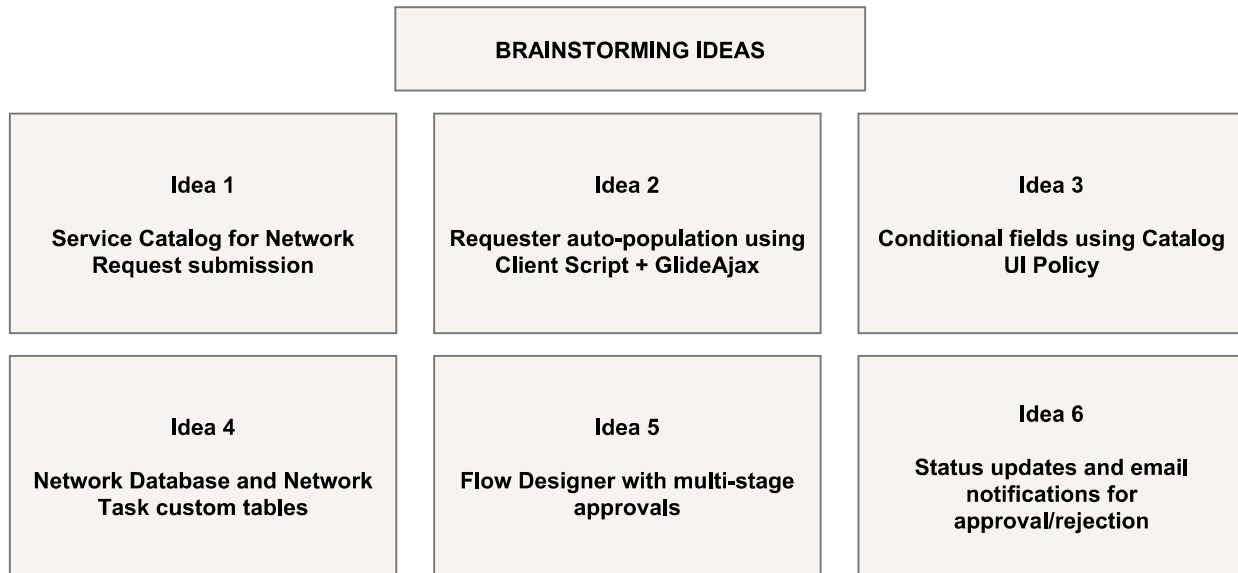

Brainstorm & Idea Prioritization

Date	10-08-2026
Team ID	23331A4450
Project Name	Automated Network Request Management System using ServiceNow
Maximum Marks	4 Marks

Brainstorming and Idea Listings:

Brainstormed Features

Key Objectives

- Automate the complete Network Request lifecycle from submission to completion.
- Provide a structured and user-friendly Service Catalog request process.
- Automate approvals, task creation, status updates and email notifications.
- Maintain request and task information in dedicated ServiceNow tables.
- Improve traceability and access control using roles and ACLs.

Implementation Map

1	Service Catalog	User submits a Network Request
2	Data Capture	Catalog variables and requester information
3	Client Automation	Client Script + GlideAjax
4	Field Control	Catalog UI Policy
5	Data Storage	Create Network Database record
6	Approval 1	Network Database approval
7	Task Creation	Create Network Task after approval
8	Approval 2	Network Task approval
9	Completion	Update records and send completion email
10	Rejection	Set Rejected status and send rejection email

ServiceNow Components Considered

Component	Purpose
Service Catalog	Submit structured Network Requests
Catalog Variables / Variable Set	Capture requester and device/request details
Catalog Client Script	Auto-populate requester information
Script Include + GlideAjax	Retrieve user information securely
Catalog UI Policy	Control conditional field visibility
Custom Tables	Store Network Database and Network Task records
Flow Designer	Automate approvals, records, status and notifications
Approvals	Handle request and task approval/rejection
Email Notifications	Notify users at important workflow stages
ACLs / Roles	Control access to application data
GitHub Source Control	Version control and application backup

Selected Idea

The selected solution combines Service Catalog submission, structured data capture, automated approvals, custom Network Database and Network Task records, status management, email notifications, and access control in one ServiceNow workflow. It was prioritized as an end-to-end solution that can be implemented and demonstrated in a ServiceNow Personal Developer Instance (PDI).
