### Empathy Map Canvas:

An empathy map is a simple visual tool used to understand the behaviours, needs, expectations, and challenges of the people who interact with the solution. For this project, the primary user is an employee who needs to submit and track a network service request.

Understanding the user's experience helps identify where manual effort, unclear status updates, approval delays, and repeated data entry can be reduced through ServiceNow automation.

# Empathy Map Canvas

## User Insights – Automated Network Request Management

| THINK & FEEL                                                                                                                                    | HEAR                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| <div>I want a quick and hassle-free way to raise a network request.</div> <div>I want to know whether my request is approved or rejected.</div> | <div>Instructions from the network team.</div> <div>Approval decisions and comments.</div>                      |
| <div>I want my information to be handled correctly.</div> <div>I do not want to repeatedly follow up with the network team.</div>               | <div>Email notifications about request progress.</div> <div>Feedback about delays or missing information.</div> |

| SEE                                                                                                      | SAY & DO                                                                                                                   |
|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <div>A structured Service Catalog form.</div> <div>Requester, device, address and document fields.</div> | <div>Submit the request through Service Catalog.</div> <div>Provide the required details and supporting document.</div>    |
| <div>Network Database and Network Task records.</div> <div>Approval and Work Status values.</div>        | <div>Wait for approval and check progress.</div> <div>Respond to the network team when more information is required.</div> |

| PAIN                                                                                                                                                                                    | GAIN                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"><li>• Long manual process</li><li>• Unclear status</li><li>• Repeated follow-up</li><li>• Risk of missing details</li><li>• Approval delays</li></ul> | <ul style="list-style-type: none"><li>• Faster submission</li><li>• Automated routing and approvals</li><li>• Clear status visibility</li><li>• Task and record automation</li><li>• Email notifications</li></ul> |

**Key Insight:** The user needs a single, transparent workflow where a network request can be submitted once, routed for approval, converted into a network task when approved, and clearly updated when approved or rejected.
