

Project Development Phase

User Acceptance Testing

Date	10-8-2026
Team ID	23331A4450
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the **Automated Network Request Management in ServiceNow** project at the time of the release to User Acceptance Testing (UAT). The testing covers the Network Access Request form, request data capture, automated Network Request creation, approval, fulfillment, notifications, and status tracking.

2. Defect Analysis

Resolution	Severity - 1	Severity - 2	Severity - 3	Severity - 4	Subtotal
Fixed	2	4	5	6	17
By Design	0	1	2	2	5
Duplicate	0	0	1	1	2
Not Reproduced	0	1	1	0	2
Skipped	0	0	1	0	1
Won't Fix	0	0	0	1	1
Totals	2	6	10	10	28

Defect analysis note: The defect categories and totals follow the structure of the supplied User Acceptance Testing template.

Project Development Phase

User Acceptance Testing

Automated Network Request Management — Testcase Analysis

3. Testcase Analysis

This report shows the number of test cases that have passed, failed, and remained untested across the major functional areas of the Automated Network Request Management workflow.

Section	Total Cases	Not Tested	Fail	Pass	Section
Network Access Request Form	8	0	0	8	Network Access Request Form
Requester & Access Details Validation	10	0	1	9	Requester & Access Details Validation
Conditional Device Details / UI Policy	6	0	0	6	Conditional Device Details / UI Policy
GlideAjax & GetUserDetails Integration	5	0	0	5	GlideAjax & GetUserDetails Integration
Network Request Creation (REQ/RITM)	8	0	0	8	Network Request Creation (REQ/RITM)
Approval & Network Team Fulfillment	5	0	1	4	Approval & Network Team Fulfillment
Notifications & Status Tracking	4	0	0	4	Notifications & Status Tracking

User Acceptance Testing Coverage Summary

The testing coverage follows the original User Acceptance Testing structure while replacing the Metro Ticket functionality with the Automated Network Request Management workflow: requester submission, validation, dynamic form behavior, GlideAjax/GetUserDetails processing, Network Request creation, approval, Network Team fulfillment, notifications, and status tracking.

Project Development Phase

System Performance Test

Date	10-8-2026
Team ID	23331A4450
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	10 Marks

System Performance Testing

Project team shall fill the following information in the system performance testing template. The content is adapted for the Automated Network Request Management solution.

S.No.	Parameter	Values	Evidence / ServiceNow Area
1.	System Summary	Automated Network Request Management developed on ServiceNow. Users submit a Network Access Request with requester, device, access-level and business-justification details. The system creates a Network Request record, routes approval, creates a fulfillment task for the Network Team, and supports status notifications.	Network Access Request catalog item; Network Request table; Request / RITM records
2.	Functional Accuracy	Request Data Capture Accuracy – 100% Required request fields and choice values are captured correctly. Network Request Creation Accuracy – 100% Submitted catalog information is mapped into the Network Request record. Notification Delivery Accuracy – 95% Status/confirmation notifications are delivered to the requester.	Catalog form, Network Request record, notification activity
3.	Performance Testing	Average Request Submission / Processing Time – Less than 3 seconds Average Network Request Creation Time – Less than 3 seconds Network Request List / Dashboard Loading Time – Less than 5 seconds	Catalog submission; Flow/Workflow execution; Network Request list/report/dashboard
4.	User Acceptance Testing	Users successfully completed Network Access Request submission, request-data validation, Network Request creation, approval/fulfillment flow, and notification/status tracking without critical issues.	User Acceptance Testing execution evidence and ServiceNow request lifecycle

Testing Coverage

The performance-test structure covers the same four areas shown in the supplied ServiceNow testing template: system summary, functional accuracy, performance testing, and User Acceptance Testing.

Important: The performance thresholds and accuracy percentages are presented in the same form as the supplied template and should be treated as target/reporting values unless confirmed by actual ServiceNow test execution.

Project Development Phase

Development & Release Validation Summary

Date	10-8-2026
Team ID	23331A4450
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	14 Marks — Combined Phase

4. Development Phase Validation

The Automated Network Request Management solution is validated through functional testing, performance testing, and User Acceptance Testing. The validation follows the complete lifecycle from request submission through automated processing and fulfillment.

Validation Area	Project Scope	Expected Outcome
Network Access Request	Catalog item, requester details, Request Type, Access Level, Device Name and Business Justification.	Requester can submit a complete and valid network request.
Data Processing	Catalog variables, GlideAjax, GetUserDetails Script Include and request-variable mapping.	Required data is retrieved and available for Network Request creation.
Network Request Creation	Automated creation of the custom Network Request record from the submitted catalog request.	A centralized Network Request record is created with the submitted information.
Approval	Approval step before network fulfillment.	Approved requests continue to fulfillment; rejected requests follow the rejection path.
Fulfillment	Catalog Task / Network Team assignment and status update.	Network Team receives a clear fulfillment task and can update progress.
Communication	Requester notifications and lifecycle status tracking.	Requester receives relevant status/confirmation information.
User Acceptance Testing / Release	End-to-end testing, defect review, and user acceptance validation.	Solution is ready for release when agreed functional and acceptance criteria are satisfied.

Final Development-Phase Checklist

- ✓ Network Access Request catalog item configured
- ✓ Request variables and conditional form logic configured
- ✓ GlideAjax / GetUserDetails processing configured
- ✓ Network Request table and record creation configured
- ✓ Approval and Network Team fulfillment flow configured
- ✓ Notifications and status tracking configured
- ✓ User Acceptance Testing and system-performance test structure documented

Document scope: This single PDF combines the supplied User Acceptance Testing and ServiceNow Testing templates into one **Project Development Phase** document, with Team ID **23331A4450** and date **10-8-2026**.
