

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	10-08-2026
Team ID	23331A4450
Project Name	Automated Network Request Management System using ServiceNow
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Network Request Submission	• Open the Network Request catalog item • Enter requester and network details • Provide device, address and supporting information • Submit the request
FR-2	Requester Information Automation	• Select the user/requester • Automatically retrieve email, name and phone • Validate and display requester information
FR-3	Request Record Management	• Create a Network Database record • Store submitted request information • Maintain request Work Status
FR-4	Approval Management	• Send Network Database approval request • Process approved and rejected decisions • Update request status based on decision
FR-5	Network Task Management	• Create Network Task after approval • Assign task to the Network team • Send task for approval • Update task and database records after decision
FR-6	Notification Management	• Send request/approval notifications • Send completion email after successful processing • Send rejection email when a request is rejected

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The system should provide a simple and user-friendly Service Catalog form so that employees can submit network requests with minimal effort.
NFR-2	Security	The system should restrict access using ServiceNow roles and ACLs and protect application data according to configured access rules.
NFR-3	Reliability	The workflow should consistently create and update Network Database and Network Task records and process approval outcomes correctly.
NFR-4	Performance	Requester information retrieval, record creation, approval processing and notifications should complete efficiently without unnecessary manual steps.
NFR-5	Availability	The application should remain accessible through the ServiceNow cloud platform for authorized users and administrators.
NFR-6	Maintainability	The solution should use modular ServiceNow components such as Catalog Client Scripts, Script Includes, UI Policies and Flow Designer so that changes can be managed independently.
